

Technical Advisory – Multi-Regional Modeling

We are continually working to improve TREDIS and we are currently working on an upgrade to the multi-regional modeling process. In the interim, please be aware that if you set up a multiple region economic model with no transportation changes in some of the regions, then you may get a zero impact shown for those regions. If you need to run the model in this way and see this condition occur, then please contact the TREDIS customer support staff at support@tredis.com so that we may further help you.
